

## Apple Deployment Workshop

For IT professionals who deploy and manage Apple networks and technical sales professionals who help customers choose Apple devices

In this 4-hour workshop, students will learn about the skills, tools, and knowledge they need to deploy iOS devices and Mac computers. Discussions and hands-on activities guide students through the decisions they must make when they deploy personally owned and organisation-owned Apple devices.

Cost: R2,500.00  
Duration: 4 Hours  
Code: APL-iOS110-012-ZA

## What you'll learn

- Define the role of mobile device management (MDM) and Apple Business Manager in successfully deploying Apple devices.
- Identify and respond to challenges that arise when deploying and managing devices without MDM.
- Discuss the iOS features that seamlessly separate work and personal data.
- Describe the benefits of device supervision for organisation-owned devices.

## Recommended knowledge

- iOS and macOS familiarity
- Basic iOS device and Mac computer navigation skills

## Course topics

### Introductions and course overview

Discover the common themes to be covered and get an explanation of the classroom setup for workshop activities.

### Personally owned and managed

Explore the difficulties you could encounter when you manually configure devices. Learn how to use an MDM solution to improve the deployment experience for users and for IT, how to turn on app distribution, and how to protect organisation data.

### Organisation owned and supervised

Discover how to use Apple Business Manager to streamline deploying organisation-owned devices. Learn about what an organisation needs to decide to allow personalisation of organisation-owned devices or to restrict functions based on user roles.

### Wrap up and considerations

Review what you learned and determine your next steps in planning for a successful deployment of Apple devices.
