

## Apple Deployment Essentials

For IT professionals who deploy and manage Apple networks and technical professionals who help customers choose Apple devices

In this 2-day course, you'll gain the skills, tools, and knowledge you need to deploy Apple devices. Interactive discussions and hands-on exercises guide you through configuring and managing Apple devices. You'll work through real-world scenarios to test and reinforce your knowledge and skills.

Cost: R9,500  
Duration: 2 days  
Code: APL-iOS111-012-ZA

## What you'll learn

- Identify similarities and differences when you deploy Apple devices.
- Observe how deployment methods adapt as organisations grow and change.
- Define the role of mobile device management (MDM) and Apple Business Manager in the successful deployment of Apple devices.
- Respond to the challenges of deploying and managing devices without MDM.
- Explain what an Apple ID is and identify when it's needed.
- Configure and manage settings, apps, and content on personally owned and organisation-owned devices.
- Design and implement deployment solutions for real-world scenarios.

## Recommended knowledge

- iOS, iPadOS, and macOS familiarity
- Basic iOS and iPadOS device and Mac computer navigation skills

## Course outline

### Manual configuration

Explore the challenges of manually configuring multiple devices in an organisation.

### Manage devices

Learn how to use MDM to configure and manage devices consistently and efficiently.

### Streamline enrollment

In this introduction to Apple Business Manager, you'll configure settings to enable over-the-air enrollment and supervision and learn how users can personalise organisation-owned devices.

### Apply policies

Learn about the security technologies that protect the system, apps, and data on Apple devices. Configure restrictions, enforce FileVault on macOS, and manage the flow of data on iOS and iPadOS.

### Refresh devices

Compare and contrast methods for restoring macOS, iOS, and iPadOS devices to factory state. Gain experience using built-in tools and discover how to rapidly return devices to service.

### Deploy shared devices

Configure devices for shared use. The devices have distributed apps and content, but users can't personalise them.

### Design a scenario

Evaluate real-world deployment scenarios. Working in teams, design a deployment that meets your scenario's needs and then present your solution to the class.
